SELECTING THE PROPER CUFF HEIGHT FOR THE LOCATOR F-Tx ABUTMENT

1. Using a periodontal probe, measure from the top of the implant to the highest point of the gingiva.
2. The cuff size should match the tissue height, as this will place the prosthetic finish line right at the gingival height and maximizes the retention surface of the Denture Attachment Housing in the prosthesis. The cuff margin is at the widest portion of the sphere (midpoint of the Abutment sphere). For subgingival finish line, choose a shorter cuff size.
